

ABOUT US

SecureIT is an information security services and solutions company that focuses on improving and sustaining the cyber security posture of its clients. SecureIT provides a comprehensive range of Cyber Security, Information Assurance and Security Compliance services to assist our clients in assuring the Integrity, Availability and Confidentiality of their information. We assess and mitigate cyber-security threats and leverage best practices to optimize and integrate cyber security solutions throughout our customers' enterprise infrastructure. Through these services and solutions, our customers manage emerging and evolving security risks and overcome compliance challenges.

BUSINESS NEED

The Office of Management and Budget requires each agency of the Federal Government to prepare and submit a report regarding the agency's performance associated with the Federal Information Security Management Act (FISMA) and Privacy Act. Small and independent agencies are not required to report at the detail or frequency of larger agencies. However these agencies must report annually on FISMA and information Privacy management.

FISMA requires all Federal Agencies to implement an IT Security Program that incorporates security regulations and guidance from OMB and the National Institute of Standards and Technology (NIST). The IT security program must define security policy, address inventory of information systems, govern security certification and accreditation of agency systems, support awareness and specialized IT security training for its personnel, and provide the means of security incident handling, response and reporting

FISMA ASSESSMENT & REPORTING SOLUTION

SecureIT provides a Rapid FISMA Assessment Service (RFAS). The assessment is performed based on the information currently available at your organization and supplemented through interviews of personnel. The assessment is based on the current Fiscal Year reporting instructions from OMB for FISMA and Privacy and provides your organization with the following deliverables:

- **Security and Privacy Assessment Report:** outlining the results of the assessment and identifying the areas not in compliance. A high level assessment is also provided regarding the security performance and quality as measured by OMB.
- **OMB FISMA Report for your Agency:** in OMB required format ready for internal review and subsequent electronic submission to OMB.
- **Cyber Security Improvement Plan:** that provides suggested steps and solutions for mitigating weaknesses and developing security program areas required by federal policy, laws, and standards that are lacking or not up to the required performance levels at your agency.

CYBERSECURITY PROGRAM SOLUTIONS

SecureIT provides the cyber security and FISMA compliance services and solutions you need to efficiently address weaknesses and areas of non-compliance.

Policy and Program Development: Develop or update your organization's existing IT Security Program to support mission requirements and strategic goals while ensuring compliance with FISMA.

Vulnerability Assessment and Management: Maximize use of available vulnerability assessment resources at your organization and if needed put in place effective weakness identification, mitigation and management processes and solutions.

Asset Discovery and Inventory: Implement solutions that discover IT assets and map them to physical and logical associations necessary for FISMA reporting. Use the solution to identify changes, determine system and application dependencies, and support information assurance and compliance efforts.

Certification and Accreditation (C&A): Provide security engineering to develop System Security Plans and Contingency Plans. Perform security control testing and prepare C&A packages in accordance with NIST SP 800-37. Implement solutions to automate and reuse planning and control assessment information to reduce costs and improve risk management.

Security Configuration Assessment and Management: Implement solutions to comply with NIST, NSA and DISA common security configuration standards that automate continual assessment and provide remediation advice.

Security Training Program: Develop and maintain the IT security training program for general awareness and role-based security training for your organization. Take advantage of existing organization resources and line of business offerings to deliver training online, track progress, report performance and increase effectiveness.
