Capabilities

SecureIT enables organizations to manage security risks associated with information technology in support of critical business processes. SecureIT leverages its corporate experience spanning civilian and defense agencies combining best practices and insights from Fortune 1000 companies in financial services and banking. The result is effective, efficient and compliant security programs; security built-into processes and systems; and reduced security risks which are visible, actionable and well managed. SecureIT assists organizations:

- Plan, implement and measure performance of security programs
- Develop security designs and plans to support the enterprise and associated information systems
- Implement Cybersecurity solutions to identify assets, assess vulnerabilities, reduce risk and measure compliance
- Manage IT security for critical information systems
- Evaluate and assess weaknesses and effectiveness of security
- Assess security controls for weaknesses and provide strategies to reduce risk and demonstrate security, privacy and compliance
- Perform independent and internal IT audits to assess security and compliance
- Educate, train, and prepare the workforce to recognize security threats, follow best practices and assess security implementation
